

# DO YOU KNOW WHAT TO DO IN CASE OF AN ACCIDENT INVOLVING HAZARDOUS SUBSTANCES?

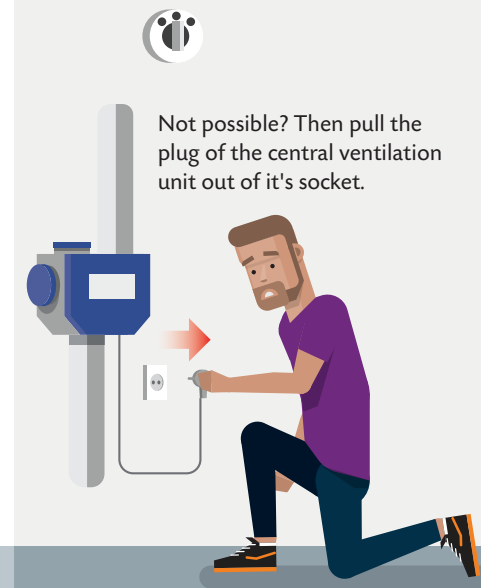

**1** Go inside as soon as possible or stay inside if you are already there! Also think of your less self-reliant neighbors.

**2** Close all windows, doors and ventilation grilles in the house.

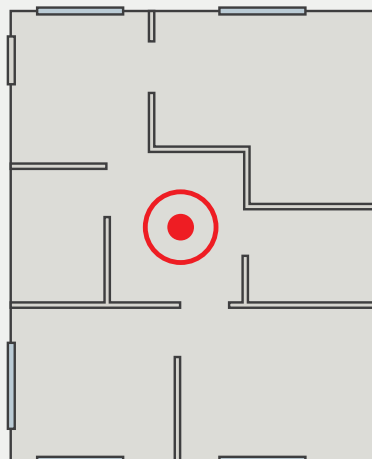

**3** Does your home have mechanical ventilation? Set the switch to 0.

Not possible? Then pull the plug of the central ventilation unit out of its socket.

Is there no plug? Then switch off the group that controls the mechanical ventilation on the breaker panel in the meter cabinet.

**4** Go to a safe room, preferably in the center part of the house or building. Stay away from windows.

**5** Follow the recommendations of the emergency services. You can get up-to-date information about incidents via **NL-Alert**, and at [www.zeelandveilig.nl](http://www.zeelandveilig.nl) on the Internet, via **Twitter @VRZ** or [www.facebook.com/zldveilig](https://www.facebook.com/zldveilig).

In addition to that, watch or listen to the **emergency channel Omroep Zeeland**.

**6** Know when it is safe to go outside again.

The emergency services will inform you about this via the media mentioned above.
